the integrated manufacturing system ims group technology numerical control and computer aided design cad were four outstanding innovations that were one time milestones of scientific industrial management this book describes the expectations and disappointments of the common pitfalls of these ingenious ideas which leads to understanding of their gradual disappearing and proposes a way to restore these methods for long term utility and value the first three innovations dominated the industry till the mid 1970s surprisingly the reason for them being replaced is the same research of the routine was misleading regardless of its ingenuity in the fourth case cad does not support capp computer aided process planning and thus numerical control could no longer support developments of a system such as a flexible and automated factory however they incorporate many features in a specific resource instead within a manufacturing system cad technology and machining centers remain remarkable as a specific unique manufacturing resource this work proposes ways to revive these innovations for the future innovation is a driver for the development of new products and production methods it should be an integral part of a system and not pursued for its own sake this volume shows explains and remedies this by treating these interesting examples
